

REPORT

1. Urban areas have the highest number of accidents:

- Enhance urban road infrastructure and implement traffic management measures.
- Increase awareness and enforcement of traffic rules in urban settings.

2. Friday has the highest number of accidents:

- Increase police presence and monitoring on Fridays.
- Promote public awareness campaigns on road safety specifically targeting Fridays.

3. Cars of age 8 and bikes of age 10 are involved in accidents:

- Encourage regular vehicle maintenance, especially for cars and bikes of specific ages.
- Promote awareness campaigns on the importance of vehicle maintenance.

4. Vehicles aged 0-5 are involved in the most accidents:

- Implement stricter vehicle inspection and maintenance regulations for newer vehicles.
- Promote safe driving practices for individuals using newer vehicles.

5. Most fatal and serious accidents occur on fine days:

- Emphasize the importance of cautious driving even in good weather conditions.
- Promote defensive driving techniques through education and awareness.

6. Most fatal and serious accidents happen due to the cause of driving for "journey as a part of work":

- Encourage employers to promote safe driving practices and provide transportation alternatives.
- Implement policies that discourage risky driving behaviors during work-related journeys.

7. Most accidents happen to vehicles powered by petrol:

- Promote awareness on the importance of vehicle safety regardless of fuel type.

- Monitor and address any specific safety concerns associated with petrol-powered vehicles.

8. Most accidents occur on Saturdays:

- Increase law enforcement and awareness campaigns on Saturdays.
- Consider implementing additional safety measures, such as increased traffic patrols.

9. Cars are the most accident-prone vehicles in both urban and rural areas:

- Focus on driver education and training for car owners.
- Implement targeted safety campaigns addressing common causes of car accidents.
